Nick Beavis

Toronto, Canada | Tel: 647-643-6268 | Email: nick.beavis@mail.utoronto.ca

Education

2024 – Present	**Bachelor of Science**, University of Toronto, Canada Program: *Physics Specialist* 92% average across all physics classes to date
2013 – 2016	**Doctor of Philosophy**, Loughborough University, UK Thesis: *Numerical Modelling of Gasoline Direct Injection Engine Processes* Supervisors: Dr. Salah Ibrahim, Prof. Weeratunge Malalasakera
2008 – 2011	**Master of Engineering**, University of Wisconsin-Madison, USA *Master of Engineering in Engine Systems*
2003 – 2007	**Bachelor of Engineering (Hons)**, Loughborough University, UK *Automotive Engineering – First Class Honours*

Research Interests

Theoretical early-universe cosmology, particularly inflation and particle cosmology, quantum cosmology and quantum foundations.

Research Experience

May 2026 – Sep 2026	***Research Student***, *University of Toronto, Canada* Research title: *Lattice simulations of SIGWs from inflation* Supervisor: Prof. Renée Hložek Research project using 3D lattice simulations to investigate primordial fluctuations and scalar-induced gravitational waves in α-attractor models of cosmic inflation. The project involved running and validating simulations, analysing power spectra using Python, and testing numerical predictions against linear perturbation theory.
May 2025 – Aug 2025	***Research Student***, *University of Toronto, Canada* Research title: *The Coalescence of Binary IMBH in Gas-Rich Star Clusters* Supervisor: Dr. Yanlong Shi Research project using N-body hydrodynamics simulations to investigate the coalescence of binary intermediate mass black holes in gas-rich star clusters. The project involved running large 3D simulations, post-processing and analysing large datasets using Python, and developing my understanding of galaxy dynamics.
Apr 2018 – Apr 2019	***Research Associate***, *Loughborough University, UK* Research position utilising 1D-cycle simulation software GT-Power to investigate the flow dynamics within a novel cylinder head concept for engineering research consultancy OakTec.
Jan 2017 – Apr 2018	***Research Associate***, *Loughborough University, UK* Continuation of PhD research to investigate whether the 3D-CFD predicted in-cylinder conditions at the point of sparking timing and the engine out emissions from a single-cylinder research engine could be correlated via the use of a neural network to produce a design tool for automotive manufacturer Jaguar Land Rover.
Sep 2013 – Dec 2016	***Doctoral Student***, *Loughborough University, UK* Full time PhD in the Low Carbon Technologies group of the Aeronautical and Automotive Engineering Department. My research involved 3D-CFD modelling and characterisation of the in-cylinder flow field and fuel injection processes using detailed computational techniques. I was also granted permission to coordinate the research project with external sponsor Jaguar Land Rover and managed additional research efforts conducted by several undergraduate students in support of the wider research goals.

(ed.) 12th International Congress, Engine Combustion Processes, Current Problems and Modern Technologies, 12-13 March 2015, Ludwigsburg, Germany. Erlangen, ESYTEC GmbH. pp. 385-396. dspace.lboro.ac.uk/2134/20016

Teaching Experience

Sep 2014 – Sep 2016 ***Teaching Assistant***, *Loughborough University, UK*
Role included teaching at undergraduate level fluid mechanics labs and marking subsequent lab report papers. Conducted this role over two academic years.

Directed Reading Groups

Sep 2025 – Present ***Gravitation: From Classical to Quantum***
A year long reading course that started by developing the mathematics and theory of general relativity, it's classical limitations and finished by exploring some of the current theories in quantum gravity.

Sep 2024 – Apr 2025 ***Fundamentals of Quantum Mechanics & Continuous Measurement***
A year long reading course that started with the fundamentals of Quantum Mechanics and finished by exploring two seminal research papers in the field of continuous measurement.

Professional Experience

Apr 2019 – May 2023 ***Contractor in System Performance Analysis***, *Cummins Ltd, Daventry, UK*

Aug 2012 – Sep 2013 ***Daventry Performance Engineering Leader***, *Cummins Ltd, Daventry, UK*

Oct 2009 – Aug 2012 ***Air-Handling Analysis-Led-Design Leader***, *Cummins Ltd, Daventry, UK*

Sep 2007 – Oct 2009 ***Combustion Performance Emissions Engineer***, *Cummins Ltd, Daventry, UK*

Sep 2005 – Sep 2006 ***Performance Development Engineering Student***, *Cummins Ltd, Daventry, UK*
